There is an
Alternative
And it's no longer a
Secret

Save Money &
The Environment
While you
Heat & Cool
your home the
natural way!
GeoFlow

In FLORIDA

We have the great advantage of having ground temperatures that are a constant 74 degrees, year round... just about the temperature we would like to keep our homes at, summer and winter. The ground temperature will be warmer than the outside air when you want to heat and cooler when you want to cool. So less energy is used to make the exchange.

It is also much more efficient to use the water in the ground to absorb heat or cold, than to use the air outside, (like all other air conditioners do) because water conducts heat 24 times better than air. Seen any air-cooled cars lately?

Every 55 days the earth absorbs as much energy from the sun as all the known reserves of oil in the world. So using the heat from the earth gives us an inexhaustible supply of free energy!

Geothermal air conditioning units have no noisy external parts to rust away, get damaged or stolen. So their lifespan is several times longer than a standard system.

In addition, as they don't have to work nearly as hard to achieve the same or better result, their internal wear is also much less.

Over 95% of geothermal air conditioner owners say they'd do it again and recommend it to their friends.

If It's So Great, Why Isn't Everybody Using GeoThermal?

The GeoThermal technology is relatively new and the expert knowledge to install, maintain and troubleshoot has just not been generally available. In the past you might have had to deal with several different companies to put an entire system together, and none of them was expert at optimizing their part of the job so it all works most efficiently together.

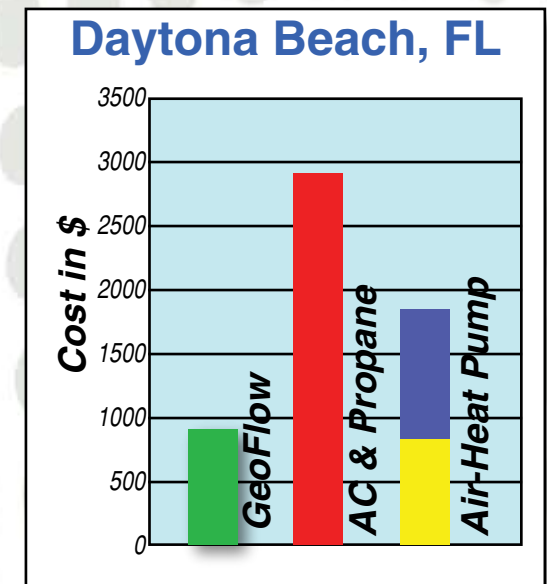

GEOFLOW now makes the difference! We have trained specialists and technical alliances with your preferred air conditioning contractor, thus bringing the entire process under one roof.

“In Your Pocket”

Benefits For You!

This graph represents the average annual cost to cool and heat a typical home in the Daytona Beach area, using the available alternative air conditioning options.

Annual Cost Cool and Heat

GeoFlow...

Hands down the most efficient!
