Mr. Robin G. Thomas
President
Laminar Flow Systems
P.O. Box 2549
St. Thomas, VI 00803

Dear Robin:

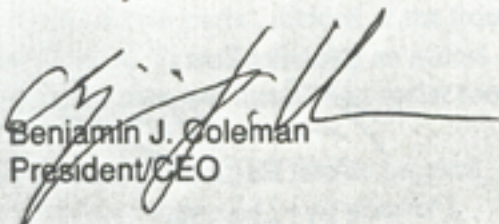

I wanted to thank you for the Laminar Flow kit we purchased for our PA-32-300 Piper Cherokee Six. We returned yesterday from a trip to Alaska, a total of almost 12,000 miles in two weeks. Our Six and your kit performed flawlessly.

Our Cherokee was fully loaded (at gross) for the entire trip. We were able to determine that your kit increased our true airspeed by 7 to 10 knots. From an average airspeed of 130 to 135 knots to an average of 140 to 145 knots. Our stall speed has also decreased by at least 5 knots.

In fact, your kit may have saved our aircraft and our lives when we were hit by a micro burst departing Portage, Wisconsin in gusty winds. We had just gotten off the runway when the Six dropped dramatically, and the stall alarm sounded multiple times. Who knows what might have happened if we didn't have the STOL performance and climb benefits of your kit.

Overall I would say that I am extremely satisfied with the Laminar Flow Kit. If you are ever in need of a reference, please feel free to use me.

Sincerely,

Benjamin J. Coleman
President/CEO
